

Diana Silva

Summary

Software engineer building and running production serverless systems on AWS, in a regulated environment handling sensitive personal data. I own services end to end - architecture, build, security, CI/CD and support. Recent work includes cutting user-facing response times 20x, moving 5 million+ records into a reporting platform now used organisation-wide, and shipping three generative AI services on Amazon Bedrock. JavaScript/Node.js, Python and C#/.NET, with infrastructure as code in CDK, CloudFormation and Terraform and PR-gated CI/CD in GitHub Actions.

Technical skills

Languages	JavaScript/Node.js, Python, C#/.NET, HTML/CSS, SQL
AWS Services	Lambda, Step Functions, DynamoDB, RDS (MySQL/PostgreSQL), API Gateway, S3, CloudFront, Cognito, Bedrock, EventBridge, SES, SNS, CloudWatch, Secrets Manager, VPC, CloudFormation, Route 53
DBMS	DynamoDB, MySQL, PostgreSQL/PostGIS, SQL Server
Tools	Git, Docker, Terraform, SAM, PowerShell, VS Code
Practices	Serverless architecture, Infrastructure as Code, cross-account IAM, VPC networking, CI/CD, technical documentation

Experience

Software Engineer	11/2024 - Current
West Northamptonshire Council (DDaT)	Northamptonshire, UK

- Built an AI content-review tool that detects personal information in documents (names, addresses, NHS and NI numbers, bank details) using Amazon Comprehend and Textract, surfacing each detection for human decision before irreversible redaction.
- Deliver public services handling sensitive disclosures - safeguarding, domestic abuse, children's mental health - to statutory safeguarding and UK GDPR obligations, with anonymous reporting paths and defined escalation routes.
- Own privacy and access control across the estate: MFA, group-based authorisation, encrypted tokens, data minimisation, and full audit trails on every staff access to citizen records.
- Run security operations across 48+ AWS accounts via a dashboard I built - daily posture scanning, 2,100+ monitors, and automated triage that raises, prioritises and closes ITSM tickets.
- Mitigate abuse by default: WAF rules against injection and XSS, rate limiting, IP reputation blocking, signed CSRF tokens, and duplicate-report detection to stop queue flooding on a public reporting service.

Education

BSc Hons Computing and IT (Software) 2023 - Current
The Open University
Milton Keynes, UK

Community

Ambassador @GirlCode
01/2025 - Current

- Promoting mission and values
- Mentoring and guiding
- Representing the organisation at conferences and meetups
- Raising awareness about gender diversity in tech.
